

Marrakech

Michael Koenig 2012

FLORA 

Marrakech combines the symmetry and directness of a trellis with the exotic features of an Oriental mural. The result is a powerful pattern amid the randomness of nature, which frames the fields and lines of the trellis with its tendrils and leaves. Marrakech is available with different dimensions, and its open ends provide a harmonious transition between grids which are joined together. When arranged vertically, Marrakech creates delicate architectural structures which only gradually reveal themselves on closer inspection and then display their actual functionality.
